

ALYSSUM

OVERVIEW

Native to the Mediterranean region, an annual or short-lived perennial herb of the mustard family. Sweet alyssum is widely grown as a border ornamental for its fragrant clusters of small flowers.

WATER

Provide at least an inch of water every week, watering them more frequently during hot weather days or dry spells.

LIGHT

Loves full sun but cannot withstand prolonged dry periods. If your region is sweltering and dry, an area with afternoon shade will work best.

SOIL

Prefers soil that is moist and well-draining.
